

Enterprise Real Time Location System

BEFORE YOU
RELEASE YOUR
EQUIPMENT BACK
INTO THE WILD!

RTLS HAS ALWAYS BEEN EXPENSIVE...

UNTIL NOW!

Dataflo's mthree asset tracking software is delivered as a service (SaaS); no site license, no software, no computers, no servers, no administration by internal IT staff; just robust, leading-edge technology from any geographic location with internet access and a browser. With SAS70 security and 3 redundant disaster recovery sites, rest assured your data is secure and available on-demand.

mthree is designed to support both Passive and Active RFID technology. Leveraging our 27 years of RFID experience, we created an architecture that is scalable and adapts to multiple RFID technology platforms.

Featuring the Motorola RFID Platform and inexpensive *non-proprietary Passive RFID tags*, tracking assets is limitless with an ROI in months not years!

For applications that require **Active** RFID, mthree provides full integration with two leading RFID hardware platforms.

ACTIONABLE DASHBOARDS

S.M.A.R.T.!

mthree has the most advanced reporting tool in the industry. Capable of delivering **Specific "Meaningful & Actionabletm"**, **Realistic** and **Timely** information in dashboard views for at a glance management. Information is based on user profiles, departments and personal requirements, mthree is the jewel you've been looking for!

"I NEED & WHERE IS IT"

Two most common phrases -

Managing your work domain with mthree allows for worry free execution. Why? Because now you have the time and tools to increase your productivity and raise the bar!

At a glance, actionable responses are at your fingertips, move, measure and manage in real time like never before. Execute your workflows at levels never dreamed of!

BE S.M.A.R.T, BE MTHREE!

MULTI-DEPARTMENTAL & MULTI-RFID TECHNOLOGIES

BUILT FOR THE HEALTH CARE INDUSTRY, MTHREE IS THE MOST CAPABLE RTLS SYSTEM EVER DESIGNED AND IS A FRACTION OF THE COST OF TRADITIONAL SYSTEMS

Biomed engineers have been plagued with finding equipment throughout their facilities, causing frustration and time wasting searches. Sometimes, it's not just locating equipment that is challenging but playing hide and seek with Nurses and their "favorite pump." When it comes to locating equipment in the wild, mthree provides the meaningful and actionable™ information needed to increase productivity at all levels:

- ~ Workflow alerts, sent automatically when equipment requires attention or maintenance.
- ~ Maintenance cycles are automatically reset when equipment leaves the biomed department and is returned to the floor.
- ~ Interfaces to existing CMMS to share location data, maintenance cycles and other pertinent information as necessary.
- ~ Recall Management - Meets JCAHO requirements.

Material Management is challenged with managing PAR levels and tracking utilization of equipment, but they are rarely given the proper tools to execute those tasks. This leads to frustration and a great deal of paper work, physical audits, over sparing and rental of equipment. With mthree, managing PAR levels at a glance and having an actionable response at your finger tips is exhilarating. Free yourself with information from our meaningful and actionable™ dashboards:

- ~ Monitor PAR levels against requests for additional equipment.
- ~ Review equipment utilization throughout the campus.
- ~ Create move requests to areas where additional equipment is needed.
- ~ Decrease the amount of expenditure on spare equipment.
- ~ Decrease the amount of lost or presumed stolen items.
- ~ Decrease the amount of time spent on asset inventory audits.

Nursing & Patient Flow Nurses are pulled in many directions throughout the day, the last thing they need is more tasks to slow them down. Tracking patients and locating equipment can be problematic. Nurses can be alerted when a patient has left the room, or when they return. With mthree's meaningful and actionable™ reporting, nursing staff can select the level of workflow alerts and patient to nurse engagement tracking:

- ~ No more phone calls to maintenance, simply move equipment to a dirty room and workflow alerts are sent to the appropriate staff.
- ~ Capable of tracking patients from admissions to room, all nursing and other staff to patient engagements.
- ~ Integration to Nurse call systems.
- ~ Locate equipment at a glance.
- ~ No more phone calls requesting equipment, proactive usage alerts based on PARS.

Security and mthree provide proactive positioning with choke point alerts sent directly to the security guard on duty for that area or to the security center. Security can be alerted to any piece of equipment passing a specific choke point(s). Cameras can be panned to the alerted area for immediate video capture, decreasing security's intervention time.

- ~ Alerts are sent with escalation levels based on time of day, duration and exit/enter choke point.
- ~ Notifications can be sent to a security system for lock down alerts.
- ~ Track appropriate personnel within specialized areas.
- ~ Notification for special needs patients exiting facility.

Information Technology Locating, provisioning and servicing IT equipment is and will always be a challenge. How many times has a workstation not been reported to the help desk with an issue, only to get an escalated call that all the workstations no longer work... With our "service me" active tag, a press of a button alerts staff to the location of the equipment under duress. With mthree, not only is there an increase in productivity when it comes to finding equipment but equipment that is purposefully hidden.

- ~ Tag note books, iPads or any mobile device with alerts sent to security and or IT based on location.
- ~ Track mobile computers, IP phones and other device that are lost or left in a location by staff.
- ~ Track IT technicians location within the facility and duration on or off campus.
- ~ Set up mobile triage locations with a portable RFID appliances or a mobile RFID Terminal.
- ~ Limited IT support and infrastructure demand.

"With mthree you get performance, flexibility, and the locating capabilities that you need to achieve your goals! Call us for a presentation and demo, it will be time well spent!"
